In this book, anthropologists, criminologists, and sociologists analyse different aspects of drug policy. The articles approach drug policy from new angles, focusing in particular on the history and consequences of drug policy in practice. How can we understand and explain the increasingly complex puzzle that we call drug policy? The authors explore in different ways how drug policy has spread into new areas of society, how new players are engaged in drug policy, and what consequences this has for drug users, citizens, or society in general. Using examples from both Denmark and the USA, Drug policy is analysed on an international and local level. This book will be of great value to advanced undergraduate and graduate students with an interest in drug policy, as well as to academics, practitioners and policy makers in the drug policy field.
